The future scope that the drone can be controlled more precisely using a commercial headset as it has more sensors and even by switching over to LABVIEW as a computer processing of the signals.
Additionally, we can implement some more features like increasing the speed of the drone.
This project can be integrated with better technologies to enhance the use of artificial limbs, various implants to improve their efficiency and performance.

7. Future Scope

The future scope that the drone can be controlled more precisely using a commercial headset as it has more sensors and even by switching over to LABVIEW as a computer processing of the signals.
Additionally, we can implement some more features like increasing the speed of the drone.
This project can be integrated with better technologies to enhance the use of artificial limbs, various implants to improve their efficiency and performance.
